Customer service guaranteed

Advanced Coast Security Medical Alarms (Medi-alarm) have been designed to allow you to maintain your independence while giving your family and friends the peace of mind that comes with knowing that help is just the press of a button away.

How does a Medi alarm work?

You activate the Medi-alarm by simply pressing a light weight waterproof pendant which may be worn around the neck, on a key chain or on the wrist.

The pendant is wirelessly connected to a console unit under or near your telephone. When the pendant button is pressed the console contacts our 24 hour monitoring station via your telephone line. Our operators then alert your nominated emergency contacts that you require assistance.

This allows you to be confident to live independently while knowing that you can summon assistance when needed.

A 'Help' button on the console also offers an additional means of summoning assistance if necessary.

Immediate response

Our monitoring station team is on call 24 hours a day, 365 days per year, ready to take action when a distress signal is received.

We provide an immediate response to nominated friends, family members or emergency services to render assistance.

Important Features

- Quick installation
- Low battery indicator which also sends a signal to our monitoring station
- Flashing green light to indicate that everything is working
- Up to 50 metre Radio range for open air sites. (subject to environmental conditions)
- Simple buttons for ease of use
- Supports up to 8 separate wireless pendants with individual identification
- Provided with a standby lithium battery with a life expectancy of 10 years under normal conditions

'Help is just the press of a button away!'

Satisfaction Guaranteed

“ In January this year my mother slipped and broke her hip at home. She lives alone. Mum has a medical alarm she wears around her neck. Mum couldn't reach the phone but she was able to press the medi alarm button.

Advanced Coast Security responded by phoning my house but as we were away there was no answer. ACS then sent an ambulance to my mother's house and she received immediate

attention for an injury that had incapacitated her. We were grateful for the prompt action by ACS and we will happily recommend them to anyone. It would have been a very different story if Mum had not had her medi alarm with her. Now we wouldn't be without that alarm.
